

DKSF-L Rotation Angle Setting Table

Because stopper bolts are not mounted on **DKSF-L** as of shipping, it rotates 360° .

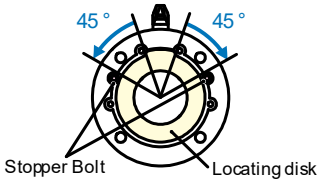

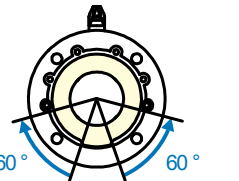

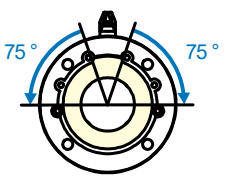

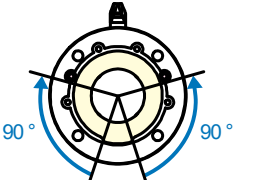

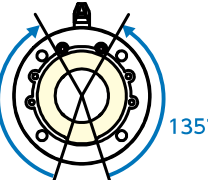

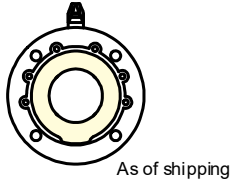

Mount the included stopper bolts to restrict the control panel rotation angle.

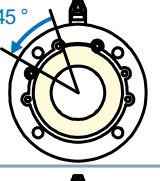

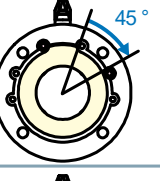

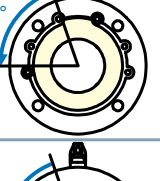

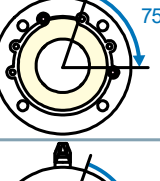

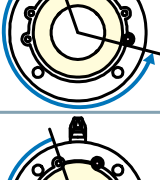

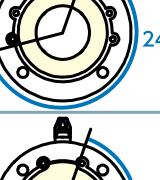

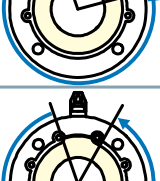

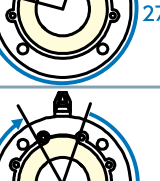

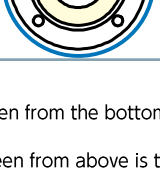

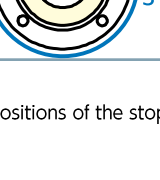

Use two stopper bolts to set the rotation angle.

When restricting the rotation angle to 315° , use only one stopper bolt.

Relationship of control panel rotation angle restriction pattern and stopper bolt/locating disk

Rotation direction	Horizontal rotation		
Locating disk (control panel) rotation angle			
	90°	120°	150°
			
	180°	270°	360°

Rotation direction	Right rotation (clockwise)	Left rotation (counterclockwise)
Locating disk (control panel) rotation angle		
		
		
		
		

- The figure shows DKSF-L as seen from the bottom. The figure in the table shows the reference positions of the stopper bolts and locating disk.
- The rotation direction when seen from above is the reference.
